

# CLOUD MIGRATION

PERFORMANCE | RELIABILITY | SECURITY

## CHOOSING A PLATFORM

### Consider your current infrastructure.

Cloud migration isn't about reinventing the wheel. It's about making sure your wheel is in tip top shape, secure and efficient for your specific needs. Make sure to select a team that is dedicated to ensuring you get exactly what you need to continue growing your business.

## PERFORMANCE

### Look for flexibility.

Your chosen cloud platform should deliver a wide variety of elements - available à la carte - so that you can add or remove components as your performance needs change.

AWS IS THE  
GO-TO FOR  
**52%**  
OF CLOUD USERS

## RELIABILITY

### Look for smart integrations.

Your chosen platform should value integrated smart, real time integrations to provide a steady, reliable connection for your clients and partners regardless of natural disasters, political unrest & other issues could interrupt your server.

WITHOUT VITAL  
AUTOMATION

**95%**

OF ISSUES ARE CAUSED BY  
HUMAN ERROR

## SECURITY

### Look for tested protection.

While security promises can seem ideal, ensure that your platform offers not only the latest in cloud protection but has actually delivered on their promises. Your company should not be the guinea pig for unknown breaches.

SECURITY IS THE NUMBER  
ONE CONCERN FOR
